Where does the same-seed pair start to diverge?
dashed: probe fires at step 1400
first divergent consumer: meta-batch indices (5/5 seeds)
gray cells: exactly 0
A Shared stream: zero before the probe
seed 1
seed 2
seed 3
seed 4
seed 5
7 layers per seed
0
−2
−4
−6
−8
log10(relative L2 vs same-seed base)
B Isolated probe: zero everywhere
5 seeds
7 layers
all 35 cells exactly zero, every checkpoint
